

# CABLE

for Rear View Camera Connection in Toyota,  
Scion, Subaru

ID: 860038

# EXAMPLES OF STANDARD DEVICES FOR WHICH CABLE IS SUITABLE

*The photo is provided for reference only. Appearance of the control panel and monitor may slightly differ depending on the car model.*

# DESCRIPTION

Cable for rear view camera connection to the OEM monitors of Toyota with Touch system, Scion with Bespoke system, Subaru with SD Navi system. Using this cable you will be able to install the aftermarket camera Plug&Play without damaging the car wires.

Image from the rear view camera will automatically be displayed on the screen when reversing. The device is connected to the 16 pin socket (as shown in the connection diagram). After connection all OEM functions which work using this socket are preserved due to transit type of connection.

**Note!** The additionally installed rear view camera should be powered from ACC line (first turn of the key), otherwise the camera input will be not active. Depending on the type of the camera to be connected, namely the operating voltage, you can use power converter to decrease heating of the linear power supply which is built in the camera. In case the camera requires more than +6 V, connect the camera power directly to ACC line.

# COMPATIBILITY

## Toyota

Model	Model years		System / Monitor	Additional compatibility conditions
	From	To		
Auris	2010	2014	Touch Touch&Go Touch&Go Plus	16 pin socket on the monitor for cables connection
