

CAR CAMERA CONNECTION CABLE

for 8" Honda i-MID Monitors

ID: 861828

EXAMPLES OF STANDARD DEVICES FOR WHICH CABLE IS SUITABLE

The photo is provided for reference only. Appearance of the control panel and monitor may slightly differ depending on the car model.

DESCRIPTION

This cable allows you to connect rear view cameras in Honda cars with OEM Honda i-MID 8» monitor. The cable offers Plug&Play installation of aftermarket cameras without damaging the OEM wiring.

Image from the rear view camera will automatically be displayed on the screen when reversing. Active parking guidelines will be shown on top of the rear view camera image (PAS function should be activated in the service menu). The device is connected to the 24 pin socket (as shown in the connection diagram).

Note! Power of the additional rear view camera should be taken from the ACC line (second key turn), otherwise the camera input will not be active. Depending on the type of camera (more specifically, on the voltage required for work) +8 V output voltage of the monitor may be used. If the camera requires more than +8 V it should be connected to the ACC line.

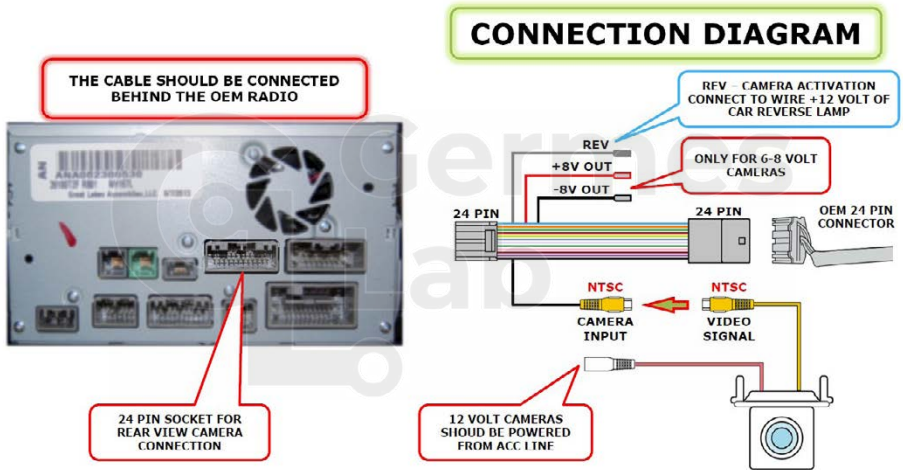

Note! Self-diagnostics should be run from the service menu of the head unit after the camera has been connected so that the camera is recognized by the car system.

COMPATIBILITY

Model	Model years		Additional compatibility conditions
	From	To	
Accord	2013	—	OEM 8" Honda i-MID monitor without touch
