Product specifications, appearance and package content may differ from those presented on the website and can be changed without notice. Please, contact sales manager before purchase.

DESCRIPTION

Cable for rear view camera connection in Mitsubishi cars of 2013-2018 MY Using this cable you will be able to install an aftermarket camera Plug&Play without damaging the car wires. You will also be able to activate and set up the active parking guidelines function (PAS) in the service menu of the monitor.

Image from the rear view camera will automatically be displayed on the screen when reversing. The device is connected to the 8 pin socket. After connection all OEM functions which work using this socket are preserved due to transit type of connection.

Note! The additionally installed rear view camera should be powered from ACC line (first turn of the key), otherwise the camera input will be not active. Depending on the type of the camera to be connected, namely on the voltage required for the camera, you can use input voltage +6 V, which the monitor produces. In case the camera requires more than +6 V, connect the camera power to ACC line.
