

CAMERA CONNECTION CABLE

for Toyota MFD GEN5/GEN6 DVD Navi
Monitors

ID: 872915

EXAMPLES OF STANDARD DEVICES FOR WHICH CABLE IS SUITABLE

The photo is provided for reference only. Appearance of the control panel and monitor may slightly differ depending on the car model.

DESCRIPTION

Cable for rear view camera connection in Toyota cars with MFD GEN5 / GEN6 multifunctional displays with DVD navigation. Using this cable you will be able to install an aftermarket camera Plug&Play without damaging the car wires.

Image from the rear view camera will automatically be displayed on the screen when reversing. The device is connected to the 24 pin socket (as shown in the connection diagram). After connection all OEM functions which work using this socket are preserved due to transit type of connection.

A special cable for rear view camera functionality activation is included in the package content. It's designed specifically for cars where rear view camera functionality was not included by the manufacturer (rear view camera activation signal was not implemented in the head unit).

Note! The additionally installed rear view camera should be powered from ACC line (first turn of the key), otherwise the camera input will be not active. Depending on the type of the camera to be connected, namely on the voltage required for the camera, you can use input voltage +6 V, which the monitor produces. In case the camera requires more than +6 V, connect the camera power to ACC line.

COMPATIBILITY

US Denso GEN5 DVD Navi

Model	Model years		System	Car radio model
	From	To		
4Runner	2006	2009	US Denso GEN5 DVD Navi	2DIN*
